

LET US HANDLE IT FOR YOU.

Oilfield Innovators Limited, LLC (OIL) was established in May of 2006 and has since evolved into a premier company for well-site pipe management. With our globally recognized units, OIL provides reliable and economical service for oilfield professionals. By handling your tubulars with our technologically innovative devices, OIL delivers what most service companies can only hope for - the ability to facilitate a speedy, safe, and cost-effective job.

THE BENEFITS

PLAYING IT SAFE

While innovation and speed are major components of how we operate, everything we create is engineered for safety. Because in today's oilfield, it pays to capitalize on every opportunity to reduce exposure to unnecessary safety hazards. OIL units improve safety by:

- Eliminating personnel on catwalk
- Eliminating moving cables and rotating sheaves on the floor
- Unit tracks back and forth to the rig floor
- Eliminating the swinging of block during pick-up and lay-down operations

VERSATILE APPLICATIONS

The unit sets up alongside the pipe rack-enabling a single man to load or unload joints of pipe. It's built to adapt from catwalk or ground-level and can even be operated in tight locations. The unit can accomplish fast and precise delivery of pipe to and from the rig floor and is able to pick up and lay down pipe on both the left and right side of unit without changing the position of the unit.

REMOTE CONTROL

The 4-joystick controls are visible, comfortable, and allow the unit to be remotely operated. The joysticks provide precise control of the unit, ensuring fast operation and a safe, smooth movement of tubulars to and from the rig floor.

THE REACH

While ever-expanding, OIL currently services the following locations:

THE UNITS

THE PAL UNIT & THE FAT BOY UNIT

Our Poleless Tubular Pick-up and Lay-down (PAL) Unit and Fat Boy Unit are engineered for safety and efficiency in handling tubular movement operations. In addition to saving lives, our units have a world-renowned reputation of increasing onsite productivity and lowering costs.

THE TUBULAR DELIVERY SYSTEM

In conjunction with our PAL Unit and Fat Boy Unit, we also offer our Tubular Delivery System (TDS), which allows the delivery of the tubing to the snubbing basket at greater heights than presently offered by conventional pick-up and lay-down machines.

UNIT SPECIFICATIONS

	THE PAL UNIT	THE FAT BOY
Unit footprint	3 ft. x 34 ft.	4 ft. x 40 ft.
Reach heights from base	18-30* ft.	20 ft.
Weight of unit	5,000 lbs.	10,000 lbs.
Weight power pack	3,000 lbs.	3,000 lbs.

*Utilizing tubular delivery system

TUBULAR HANDLING CAPACITY

THE PAL UNIT	THE FAT BOY
2 1/2" tubing to 7" casing	Up to 16" casing
4 3/4" drill collars	6 1/2" drill collars
Max lift 1,300 lbs.	Max lift 5,000 lbs.
Steel, chrome, and coated pipe	Up to 47 ft. joints
